

In 2023, a jewelry heist in Noida took 4 months to solve because 3 systems didn't talk to each other.

“Same crime. Same evidence. CRIMENEXUS: 4 days.”

The Truth: One syndicate. 3 states. 12 phones. 4 banks. Your IO sees 12 files. The criminal sees one business.

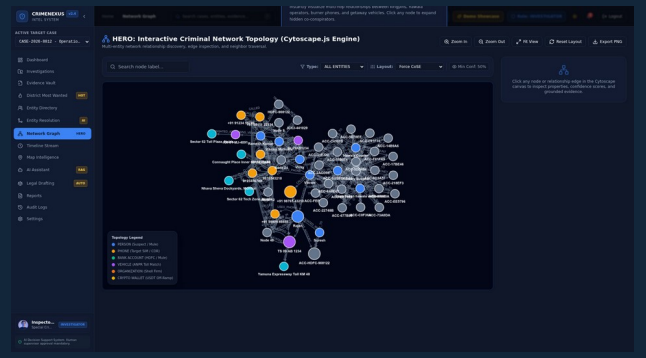

The Cost: An IO spends 4-6 hours cross-referencing CDRs, banks, FIRs, ANPR. Connections are missed. Cases go cold.

The Promise: Upload an FIR. See the criminal network in 30 seconds. Download the court dossier in 1 click.

MIT Licensed · Open Source · Zero API Costs · Works Offline · 172/172 Tests P

Not 30 Features. Three Things. On Day One.

1 See the Network

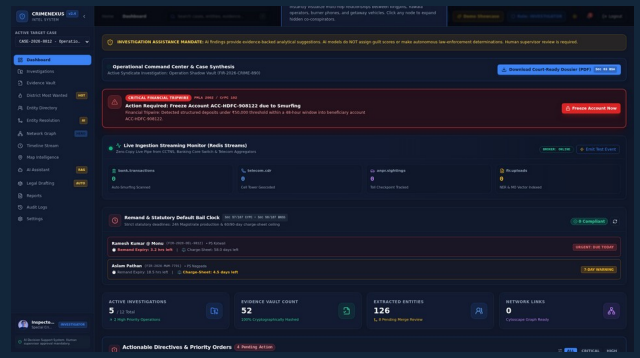

Upload a scanned FIR → the entire criminal network appears as a graph.

30 seconds

vs. 4 hours of manual cross-referencing

2 Freeze the Account

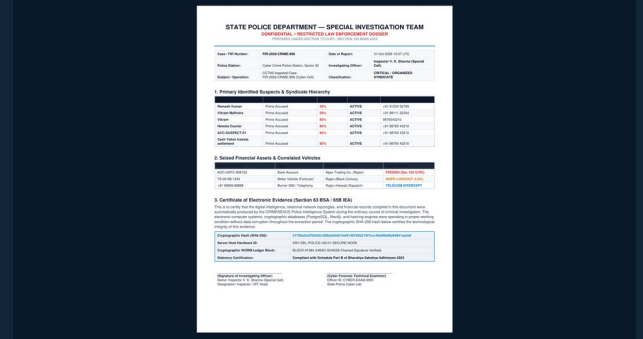

System flags '4 txns of ₹49,999 from 4 mules' → Sec 102 CrPC notice auto-drafted.

3 seconds

vs. 6 hours of typing + legal risk

3 Download Court Dossier

One click → Section 65B certificate + SHA-256 manifest + full case PDF.

4 seconds

vs. 8 hours of clerk work

lse — SMS alerts, voice biometrics, cold case engine — is built. But these three save your officers on Mond

u Already Have vs. What CRIMENE

Capability	CCTNS (NIC)	MahaCrimeOS (State)	CRIMENEXUS (Deploy Ready)
Primary Purpose	Record-keeper. Searchable FIRs.	Text chatbot. Talks to you.	**Intelligence engine. Shows you the network.**
Evidence in Court	Paper files	⚠ AI black box	**SHAP XAI + 65B Certificate**
Works on 2 Mbps	⚠ Slow, heavy	Cloud-dependent	**Lite Mode: 200 KB, offline**
Cost / Station / Year	Government-paid	Azure subscription	**₹0. MIT license.**
Where Data Lives	NIC (Govt)	Microsoft Cloud (US)	**Your server, air-gapped**
Your Officers' View	'Another portal'	'Another password'	**'Saved me 6 hours today'**

memory. MahaCrimeOS is your chat assistant. CRIMENEXUS is your intelligence officer — and it never sends data

⚡ OPTIONAL 90-SECOND LIVE DEMO: Upload a sample FIR right now. Watch the graph update on the projector.

Ready. 12% Needs You. And If It Fails, You Lose N

READY TODAY (88%)

Multi-tenant isolation (5 stations on 1 server)
Automated backups (30-day retention, DR tested)
Time-travel audit (defeats defense fabrication challenges)
Bail opposition, cold case engine, warrant tracker
Multi-lingual UI (EN/HI/MR/KN/TE), Thana Lite Mode
12-hour shift tokens (shared terminal safe, no OTP fatigue)

BLOCKED — AND BY WHOM (12%)

⚠ CCTNS live sync → NCRB MoU (needs your nodal officer)
⚠ Bank/telecom feeds → RBI/DoT (needs departmental letter)
⚠ STQC certification → CERT-In audit (~₹3-5 lakh)
⚠ Bhashini OCR → MeitY API keys (needs formal request)
⚠ GovCloud hosting → NIC MeghRaj (needs department file)

IF THE PILOT FAILS, HERE IS WHAT HAPPENS:

Nothing. The system is MIT-licensed. It runs on one server. To remove it, you run one command. There is no vendor lock-in, no penalty clause, no data hostage. If your IOs hate it after 60 days, you turn it off and I walk away. That is the deal.

pprove the 60-Day Cyber Cell Pilot. Nothing Mor

ASK 1: Approve 60-Day Cyber Cell Pilot

1 dedicated server · 5 Investigating Officers
5 active case files · No CCTNS needed

Budget: Under ₹10 lakh (server + STQC + 60-day maintenance)
₹0 recurring license cost

ASK 2: Sponsor STQC Certification

CERT-In empanelled VAPT auditor
Cost: ₹3-5 lakh · one-time audit

Unlocks: Official State Police & National
CCTNS procurement eligibility

ASK 3: Nominate Nodal Officer for CCTNS MoU

Point of contact for NCRB/NIC
Timeline: Signature now · MoU filed in 30d

Closes: The final 12% gap for automated
state-wide CAS synchronization

60-DAY ROADMAP: Week 1-2: Deploy on 1 Server → Week 3-6: 5 IOs on Live Cases → Week 7-8: STQC VAPT Audit → Week 9-10: Report to DGP

"I am not asking for a crore of rupees or a year of patience. I am asking for 60 days, 5 officers, and one server. If it works, your IOs will never go back. If it fails, you will have lost nothing — because I will have built the whole thing for free."
