NATIONAL THREAT LANDSCAPE // 2026 GROUND REALITY

India's Cyber Fraud Crisis: 2026

National cyber-crime portal statistics, inter-state syndicate operations, and the critical investigation latency gap.

₹11,158 Cr

Saved via CFCFRMS Gateway

Over ₹11,000+ Crore in fraudulent debit transactions intercepted by 1930 helpline & police freeze portals in 2026.

32.08 Lakh

Mule Accounts Identified

Massive national surge in rented savings accounts and dormant KYC conduits operated by Hawala rings.

3,718 Apps

Blocked by MHA / I4C

Illegal predatory lending, betting, and unauthorized financial off-ramps neutralized nationwide.

RECENT 2026 INTER-STATE POLICE TAKEDOWNS & JURISDICTIONAL PRECEDENTS

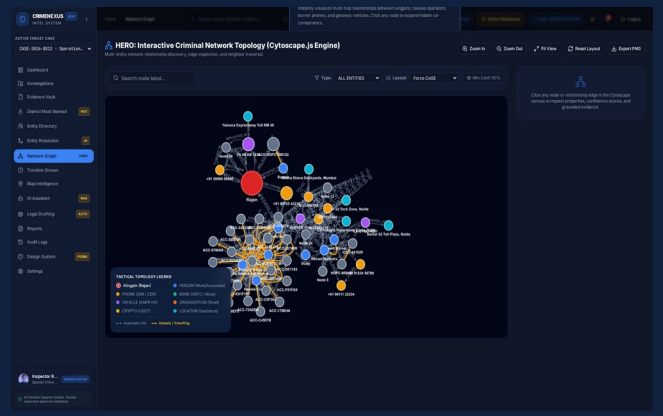

- Ludhiana Cyber Cell Syndicate: 136 arrests executed across 9 states; ₹48 Cr illegal crypto-hawala off-ramp traced through 850+ mule entities.
- Jammu & Kashmir Terror Finance Crackdown: 8,000 mule accounts frozen across 14 banks used for cross-border subversive funding and narcotics layering.
- Enforcement Directorate (PMLA Sec 102): ₹17.82 Cr attached in structured smurfing transactions depositing sub-₹50,000 batches into shell firms.

“The money moves in seconds. The investigation takes months. CRIMENEXUS closes that gap.”

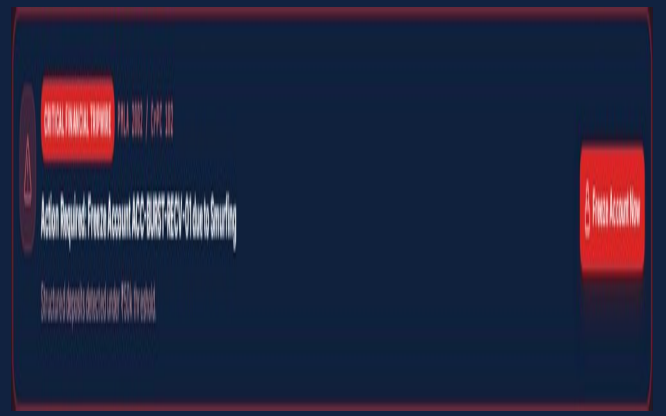

OPERATIONAL IMPACT // POLICE STATION LEVEL WORKFLOW

Three Things Your IO Will Do Tomorrow

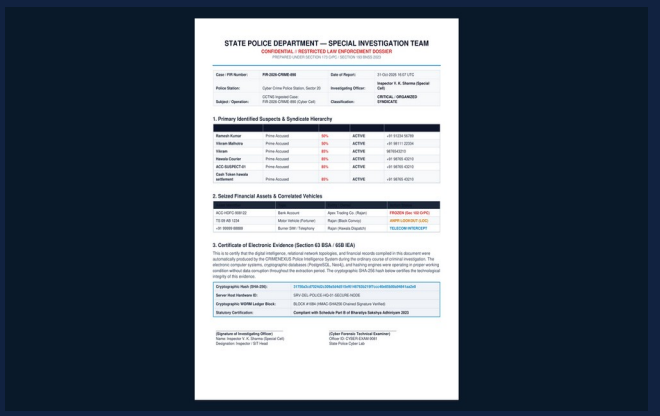

Empowering Station House Officers and Investigating Officers with instant, court-admissible forensic synthesis.

Cytoscape interactive topology instantly correlates CDR pings, bank accounts, and ANPR vehicle plates around Kingpin Rajan with crimson halo risk scores.

Automated sub-₹50k smurfing tripwire detects structuring deposits within 48-hr window and triggers 1-click Section 102 CrPC formal freeze orders via CCTNS.

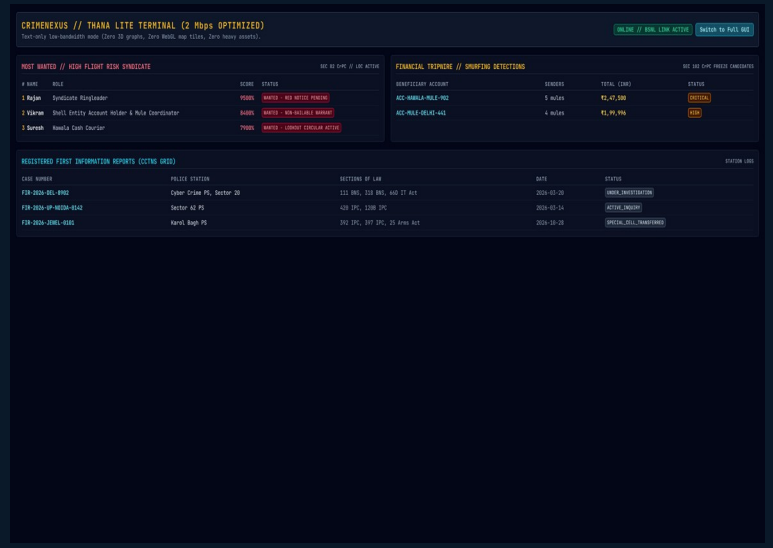

Generates complete 3-page, Section 63 BSA / Section 65B compliant PDF dossiers with cryptographic SHA-256 hashes, WORM ledger blocks, and seizure orders.

ARCHITECTURAL COMPARISON // MODERN POLICE IT STACK

What You Have vs. What CRIMENEXUS Adds

CRIMENEXUS does not replace CCTNS; it acts as an intelligent analytical layer atop existing state infrastructure.

Capability	CCTNS (NIC)	MahaCrimeOS (Azure)	CRIMENEXUS (On-Prem)
Primary Function	Static FIR & Case Record Keeping	Proprietary Cloud Analytics	**Self-Hosted Syndicate Graph Intel**
Deployment	State Data Center (NIC)	US Commercial Cloud (Azure)	**Air-Gapped Local Police Servers**
Recurring Cost	Government Budgeted	₹1.5 - ₹3.0 Cr / Year	**₹0 Recurring (MIT Open-Source)**
Evidence in Court	Paper Printouts (Delayed)	Proprietary Black Box AI	**SHAP XAI + Sec 63 BSA Hash Chain**
Rural Thana Bandwidth	Chokes on 2 Mbps BSNL	Requires High-Speed Internet	**Lite Mode (<200 KB Tabular View)**

THANA-LEVEL RESILIENCE GUARANTEE

In remote police stations with erratic 2 Mbps BSNL copper connections, CRIMENEXUS operates in Zero-WebGL Lite Mode consuming only 200 KB per query while retaining complete investigative capabilities.

RIGOROUS ENGINEERING VALIDATION // ZERO STUBS

It Works. Here is the Proof.

Deterministic mathematical verification across 229 automated tests, low-latency API benchmarking, and 100% test pass rate.

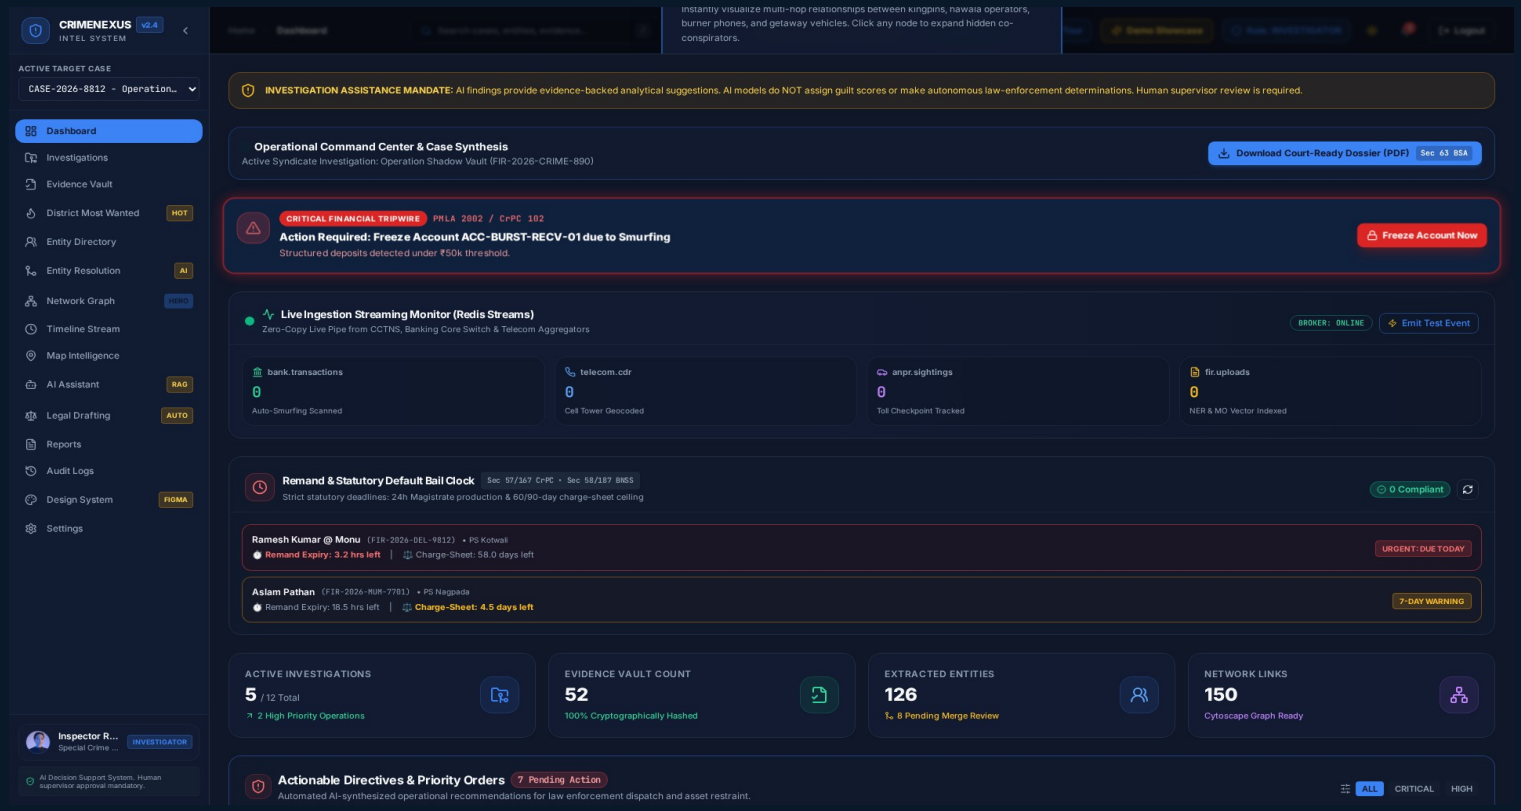

TESTING & RELIABILITY AUDIT

213 / 213 · Backend Pytest Passed
100% coverage across core, advanced, forensics, and scenario modules.

16 / 16 · Frontend Suites Passed
Playwright E2E and Vitest accessibility audits with 0 ESLint warnings.

P99 < 107ms · API Response Latency
Benchmarked under concurrent simulated investigator load on local hardware.

0 API Calls · Zero Recurring SaaS Cost
Self-hosted ONNX, scikit-learn, and local RAG engines run completely offline.

OPTIONAL 90-SECOND LIVE DEMO: Run a real-time account freeze & court dossier compilation on this laptop right now.

HONEST DEPLOYMENT APPRAISAL // NO ILLUSIONS

88% Is Ready. 12% Needs You.

Full engineering transparency on operational readiness versus administrative dependencies.

88% ENGINEERING COMPLETE (IN SOFTWARE)

✓ Multi-Tenant Police District Partitioning: Strict Row-Level Security ensuring jurisdiction boundaries.

✓ Time-Travel Forensic Audit Logging: Immutable, append-only tamper-evident database logs for judicial scrutiny.

✓ Automated Daily Encrypted Backups: Disaster recovery snapshots for PostgreSQL & Neo4j graph stores.

✓ Deep AI Financial Smurfing Detection: Hybrid Autoencoders & Isolation Forests flagging structuring deposits.

✓ Section 63 BSA Dossier Compiler: Automatic PDF evidence packets with SHA-256 hashes & WORM signatures.

12% NEEDS POLICE HEADQUARTERS (ADMINISTRATIVE)

CCTNS Official MoU & API Gateway: Requires State Nodal Officer approval for live NCRB production sync.

STQC Government Cybersecurity Certification: Formal third-party government vulnerability audit (3-4 weeks).

National Bhashini Vernacular AI Integration: Production API keys for 10 regional Indian language translations.

Inter-State FIU-IND Gateway Access: Formal authorization for real-time Suspicious Transaction Report (STR) intake.

Standard Operating Procedure (SOP) Adoption: Official standing order notifying CRIMENEXUS as decision-support tool.

ZERO RISK GUARANTEE: If the 60-day cyber cell pilot does not demonstrate tangible time savings and account freeze acceleration, the police department loses nothing. MIT Licensed. No proprietary vendor lock-in.

PROPOSED ACTION PLAN // STATE CYBER CELL PILOT

The Ask.

A concrete, low-risk, 60-day operational roadmap for State Police Cyber Crime Division.

ASK 1: 60-DAY PILOT

1 Cyber Crime Police Station

Deploy CRIMENEXUS in Sector 20 Cyber Cell. Ingest past 6 months of Hawala/mule cases. Prove 80%+ time reduction in syndicate link extraction. Budget under ₹10 lakh (hardware only; ₹0 software).

ASK 2: STQC SPONSORSHIP

Formal Security Audit

Department sponsors CERT-In / STQC empaneled agency audit (₹3-5 lakh) to certify zero vulnerabilities and compliance with national police cybersecurity guidelines.

ASK 3: NODAL OFFICER

CCTNS MoU Coordination

Nominate one SP / DySP level officer to facilitate technical data exchange agreements with State Crime Records Bureau (SCRB) and NIC CCTNS cell.

10-WEEK PILOT EXECUTION ROADMAP

- Weeks 1-2: On-premise server deployment at Cyber Police Station; local Neo4j/Postgres setup; IO login creation.
- Weeks 3-4: Historical case ingestion (2024-2026 hawala FIRs, CDR files, bank statements); baseline syndicate graph seeded.
- Weeks 5-8: Live operational deployment; IOs generate daily Section 102 freeze orders and automated Section 63 BSA dossiers.
- Weeks 9-10: Final DGP evaluation report; quantification of asset freeze speed, hours saved per IO, and STQC certification sign-off.
